AstraZeneca R&D Standard Operating Procedure

Standard Operating Procedure - INTERNAL SHARING OF SCIENTIFIC DATA

Key Points

This process enables AZ to share approved scientific data with internal researchers in compliance with regulations and industry best practices.

PURPOSE & SCOPE

This Standard Operating Procedure (SOP) outlines the process for providing broad internal access to scientific data within the AstraZeneca Group of Companies (AstraZeneca), in order to generate new insights and build scientific leadership.

This SOP covers internal sharing of scientific data for primary or secondary use, where analysis is conducted by AstraZeneca employees, contractors, or contracted third parties working on AstraZeneca's behalf.

The following activities are out of scope:

- Primary-use activities governed by the Product Team, for example CSR analyses Information Exploration Management Team (IEMT) analyses and equivalents
- Sharing of scientific data with external parties for research purposes

Timelines of Data Available for Sharing

Data is eligible for sharing on approval from the Product Team, or open by default at timelines agreed with the Data Owner.

By default, data reported as part of a clinical trial is eligible for sharing at 6 months after database lock (DBL). This includes clinical, imaging, genomics and omics data, and both interventional and primary observational trials.

Data not reported as part of clinical trials, which can include genomics data, omics data and other data types, will be made available after primary publication submission. This implies that the originating scientists have resolved patent considerations, assured themselves of the assay validation and assessed commercial considerations. Data that is not part of a publication can be made available on a case-by-case basis, after approval from the Data Owner or delegate and after the Analysis Team attends an orientation session with the primary user.

In some circumstances, where the Product Team wishes to delay access to the data beyond these default timelines, this can be escalated to the relevant Therapy Area Leadership Team (TALT) member accountable for the programme, who will consider the request, adjudicate and make their decision known to the Product Team, Analysis Team and Data Office.

WHAT YOU NEED TO DO (PROCEDURE)

This process begins when the Analysis Team submits a Research Analysis Plan ("Request"), on the AstraZeneca Data Access Portal ("the System"). The Head of Scientific Data Provisioning is overall accountable for the review of the Request, the preparation and sharing of requested data and the follow-up post-sharing.

GENERAL PRINCIPLES

RESPONSIBILITIES AND DELEGATION

The RACI for each process step shows which generic roles are Responsible (R), Accountable (A), Consulted (C) and Informed (I) (defined in AZ glossary). An individual must be appropriately qualified and can fulfil multiple roles. Responsibility can be delegated to another appropriately qualified individual. Accountability cannot be delegated.

This SOP also applies to independent contractors and suppliers who assume any of the roles described in this SOP, unless contractual agreements specify that they follow their own procedural documents. The Accountable individual must be an AstraZeneca employee to ensure sponsor oversight.

1 RECEIVE AND REVIEW REQUEST

Activity	RACI
1.1 Declare Research Intent The Analysis Team declares their intent by submitting a Request on the System. The Request includes a title, research hypothesis, planned analysis, intended use and communication plan, and contains a level of detail commensurate with the investigation. Where the analysis is exploratory in nature, the same principles apply, however less details are required in the Request and outcome.	**R** Analysis Team **A** Analysis Lead **I** Scientific Data Provisioning Representative
1.2 Receive and Review Internal Request The Scientific Data Provisioning Representative receives the Request from the Analysis Team. The Scientific Data Provisioning Representative reviews and triages the Request, as per Data Provisioning Guidelines and in consultation with the Product Team, Therapeutic Area Subject Matter Experts, and other relevant stakeholders where applicable, to assess the following: • Scientific Merit • Contractual Restrictions and Data Ownership • Data Availability • Legal and Ethical Basis for Sharing • Business Sensitivity • Analysis Team Training and Qualifications • IT Environment Governance groups for the specific data type will be consulted where applicable. Where China data is requested, the Scientific Data Provisioning Representative reviews and triages the request in accordance with the HGR SOP and associated procedural documents. The Scientific Data Provisioning Representative determines whether to proceed with the Request and the eligible portion of data for sharing. The Scientific Data Provisioning Representative documents this within the System and communicates this decision to the Analysis Team and any other impacted internal stakeholders. If it is communicated that AZ will proceed with the Request, go to step 2.1. If it is communicated that AZ will not proceed with the Request, go to step 4.4.	**R** Scientific Data Provisioning Representative **A** Head of Scientific Data Provisioning **C** Product Team, Therapeutic Area Subject Matter Experts **I** Analysis Team

2 PREPARE AND SHARE APPROVED REQUESTED DATA

Activity	RACI
2.1 Prepare and share the agreed data The Data Preparation Representative prepares the eligible portion of the data (all or a subset), based on legal and ethical restrictions identified in section 1.2. This is carried out as per relevant procedures for the data type. The Data Preparation Representative grants appropriately qualified Analysis Team members access to the data in an approved IT environment, and informs the Analysis Team and Scientific Data Provisioning Representative when complete.	**R** Data Preparation Representative **A** Head of Data Preparation **I** Analysis Team, Scientific Data Provisioning Representative

3 CONDUCT ANALYSIS

Activity	RACI
3.1 Conduct Analysis After receiving access to the data, the Analysis Team conducts the analysis in the approved IT environment, in line with the legal and ethical obligations outlined in the Global Standard for Internal Sharing of Scientific Data. Where China data is shared, the Analysis Lead will ensure analysis is conducted in accordance with the HGR SOP and associated procedural documents. Where analysis is intended for decision making during the product lifecycle or submission activities, the Analysis Team will use a GxP environment to conduct or recreate the analysis and for storage of the outputs. The Analysis Team will inform the Scientific Data Provisioning Representative of any changes to the Request. This includes changes to the analysis plan, IT environment or Analysis Team members accessing the data.	**R** Analysis Team **A** Analysis Lead **I** Scientific data Provisioning Representative

4 FOLLOW-UP POST SHARING

Activity	RACI
4.1 Share Insight On completion of the analysis, regardless of the outcome, the Analysis Team will place a descriptive summary of the results in the Results Repository. These will be available to the AstraZeneca research community.	**R** Analysis Team **A** Analysis Lead **C** Scientific Data Provisioning Representative
4.2 Communication of Results to Product Team Once the Analysis Team has uploaded the results, the Scientific Data Provisioning Representative shares these with the Product Team and any other relevant stakeholders. Where the outputs are intended for internal decision making or external communication, the Scientific Data Provisioning Representative co-ordinates the necessary approvals from the Product Team and any other relevant stakeholders. If the outputs are intended for external communication, go to step 4.3. If the outputs are not intended for external communication, go to step 4.4.	**R** Scientific Data Provisioning Representative **A** Head of Scientific Data Provisioning **C** Data Owner **I** Analysis Team
4.3 Follow AZ Publication Process Where outputs are intended for external communication, the Analysis Team will follow the current AZ publication processes, as outlined in the AZ Global Publications Standard.	**R** Analysis Team **A** Analysis Lead **C** Scientific Data Provisioning Representative
4.4 Close Internal Request When the outputs have been shared and any necessary approvals granted, the Scientific Data Provisioning Representative confirms that access to the data has been revoked, and closes the Request. The Scientific Data Provisioning Representative communicates to the Analysis Team that the Request has been closed.	**R** Scientific data Provisioning Representative **A** Head of Scientific Data Provisioning **C** Data Preparation Representative **I** Analysis Team

5 PROCESS OVERSIGHT

Activity	RACI
5.1 Tracking and Oversight On a regular basis, Data Office will review the Request pipeline and track the progress from submission to close of a Request to ensure process oversight, fulfilment of legal and ethical obligations and secure IT environments. Data Office will report to relevant stakeholders about the value achieved and other relevant metrics and information, and drive continuous improvement of process to ensure quick and easy ways to explore AstraZeneca data and knowledge sharing in a responsible way.	**R** Data Office Team **A** Head of Data Office **C** Relevant stakeholders across AstraZeneca
5.2 Compliance and Assurance On a quarterly basis, the Data Compliance Representative will review the pipeline for the quarter and conduct ad hoc checks to provide assurance of compliance. The Data Compliance Representative will work with relevant stakeholders, including the Scientific Data Provisioning Representative and Analysis Team and other relevant stakeholders to shape corrective and preventive actions as needed as per the Quality Issue Reporting and Management SOP and R&D Data Compliance Guideline, to ensure compliance with policies is met.	**R** Data Compliance Representative **A** Data Policy Director - Compliance **C** Scientific data Provisioning Representative, Analysis Team and relevant stakeholders as required

ROLES & RESPONSIBILITIES

Role	Description
Data Owner	The senior person with overall accountability for the meaning, content, quality and distribution of a given set of data.
Product Team	This cross-functional team encompasses a broad range of aspects and perspectives of drug development and commercialisation for a molecular entity. The Global Product Lead, Global Clinical Head and Biometrics Team Lead and relevant Safety Representatives (or equivalents) Project Toxicology Lead for pre-clinical and SSaMT Lead and Global Safety Physician for the product from this team will have the opportunity to review iDAP requests as per section 1.2 In exceptional circumstances, for example when there is no Product Team in place, the relevant Therapeutic Area Leadership Team (TALT) member accountable for the programme may be required to consider a request.
Head of Scientific Data Provisioning	The senior person with overall accountability for the data provisioning program for its respective business data domain. This includes providing assurance against data standards to the Data Owner.
Scientific data Provisioning representative	The subject matter expert who drives, facilitate, implement and/or execute the data provisioning program.
Analysis Lead	The senior person with overall accountability for the scientific research that requires access to strictly confidential scientific data.
Analysis Team	The subject matter expert requesting access to strictly confidential scientific data to conduct scientific research.
Head of Data Preparation	The senior person with overall accountability for preparation of scientific data in line with legal and ethical obligations.
Data Preparation Representative	The subject matter expert responsible for preparation of scientific data in line with legal and ethical obligations.
Data Compliance Representative	The subject matter expert responsible for assuring that all data sharing policies and external regulations are followed.

GLOSSARY

Term	Description
Personal Data	Personal Data is any information which directly or indirectly can be used to identify a living natural person. Personal data includes information which indirectly identifies an individual when combined with other pieces of information, e.g. personal address plus date of birth, which can easily identify an individual by checking official country registrars.
Scientific Data	Representations of facts, concepts, or instructions of a scientific nature in a manner suitable for communication, interpretation, or processing by humans or by automated means.
Strictly Confidential	Strictly Confidential is an information security class, indicating that access must be restricted to a defined group to prevent its exposure to parties that should not see it, as outlined in the Information Security Classification Global Standard.
Research Analysis Plan ("Request")	The Research Analysis Plan details the research hypothesis, planned analysis, intended use and communication plan, at a level commensurate with the level of investigation. Note that the internal Data Access Policy Research Analysis Plan is different from a Statistical Analysis Plan.
Database Lock (DBL)	This refers to the final database lock upon which the primary statistical analysis will be completed and the CSR written, or interim database locks where these have been used for external communication.
Primary-use	Primary-use of data is defined as research planned in the clinical trial, including the assembly of a licensing submission and regulatory, payer or safety questions related to the product, as well as within related research activities necessary for the drug development programme. This includes research to: • Better understand the studied disease and associated health problems • Learn from past studies to plan new studies • Understand how the study drug and similar drugs work in the body
Secondary-use	Secondary-use of data, also referred to as re-use or future use, is defined as use of data for purposes beyond the primary purpose that the data was collected for.
Publication	Scientific publications are defined as external disclosure of AstraZeneca information derived by science, covering products, projects, processes and know-how, as specified in the AstraZeneca Global Publications Standard.
